

# H520

## BUMPER CAGE

## Assembly Instructions

## **Thank you for purchasing the H520 Bumper Cage.**

The Bumper Cage has been developed to increase the operational safety of the aircraft and get closer to objects with confidence and reduced risk of impacting propellers.

Each system is hand finished to ensure quality and is shipped with a re-usable case to store all parts when not in use.

Spare parts can be ordered from the Yuneec UK website. ([www.yuneec.uk](http://www.yuneec.uk))

## **IMPORTANT**

Before assembling the cage please ensure all the parts are included. If any are missing please contact Yuneec immediately.

Care should be taken during assembly and disassembly that the rods do not cause injury. Beware of the sharp points on the carbon rods when handling them.

**An assembly video is available on the Yuneec website. [www.yuneec.uk](http://www.yuneec.uk)**
